Dameware Nt Utilities 800102 Crack

NT Utilities (DNTU) provides an integrated set of Microsoft Windows administration utilities in a centralized interface for remote access. This allows you to manage processes, files, public information, applications and workstations just like an administrator in the office. DNU consists of two components - DND (for decentralized environment management) and DnTu (for unified remote environment management). The DND component includes a set of utilities responsible for application, file, and network administration. The complex includes a data protection tool and a middle server for hosting applications, templates, documents and working with them. DnTU includes a set of services for remote service configuration. The Microsoft Hyper-V virtualization environment allows you to create many virtual machines on the same platform. To access the server via a network interface, a special utility (for example, dntdw.exe) or a service (for example: dnudw.sys) must be installed and configured on each client machine. Network Services allows you to access critical data and resources by connecting to a server infrastructure using the TCP/IP protocol. The most common network services are: dnsupd, pdns, rsync, nsopt, syncs, telnet, etc. The development of these network services is netswap and Intermag. On the basis of DNTE, the infrastructure is configured, replicated, backed up and restored. DNTE allows you to remotely search and restore various services stored on computers and server infrastructure. Through the network, these services can be "configured", updated or removed. DnTE allows for decentralized shutdown of services through remote user transition between administrative nodes in the DnTE environment and decentralization of resource management through a client-server mechanism. Dianet, compared to DNICP, allows you to organize a virtual server without the need to create a separate physical server. DDN allows you to centrally manage the distribution of resources between processors, groups and users of the local network. For example, through client-to-client or email programs.
